ABSTRACT

This study is aimed to synthesize, characterize and screen the biological activity of a series of Synthesis of Synthesis of 1-((3-(3-(1,9-Dihydropyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea(10) was prepared by Indole-3-carbaldehyde and chloro ethyl acetate were dissolved in DMF. To this reaction mixture anhydrous K_2CO_3 was added and the reaction mixture was stirred at room temperature ($35^\circ C$) for 8 hours. To afford 2-(3-formyl-1H-indol-1-yl)acetate(3). To this reaction mixture Equimolar quantity of 4,5-dihydro pyrene-1-amine(4) were dissolved in absolute alcohol, to this three drops of acetic acid was added then heated on a steam bath for 5-6hrs at $100^\circ C$ to obtain Ethyl2-(3-((1,9dihydro pyrene-6-yl imino)methyl)-1H-indol-1-yl)acetate(5). To this reaction mixture thioacetic acid and TEA, Dioxane was added and the mixture stirred at room temperature for 30min. compound Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetate(6) was obtained. After hydrolysis to this reaction mixture isobutyl chloroformate (1:1eq) was added stirred for 30min, and aq NaN_3 (3eq) was added and stirred for 20min at $0^\circ C$. To obtain 2-(1-(2-azido-2-oxoethyl)-1H-indol-3-yl)-3-(1,9-dihydropyren-6-yl)thiazolidin-4-one(8). The reaction mixture is treated with aniline(9) to obtain of 1-((3-(3-(1,9-Dihydropyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea(10) was obtained. The structure of these newly synthesized compounds was characterised by 1H NMR, ^{13}C NMR, Mass, IR, and elemental analysis. The antimicrobial activity of the novel compounds was screened by agar disc diffusion method.

KEYWORDS; Indole-3-carboxaldehyde, DMF, phenyl derivatives, Ureas, thiocarboxylic acid, halo esters

INTRODUCTION

Hetero cyclic compounds represent an important class of biological molecules. The hetero cyclic molecules which possess indole, 1,3,4 oxadiazole and thiazolidinone moieties exhibit wide range of biological activities. Indoles are one of the most important alkaloids molecules found extensively in biological systems, which play vital role in many of the biochemical process. Indole ring constitutes an important basic skeleton and development of the drug. The classical indole drugs are indomethacin and indoxole. Indole derivatives found to possess high which includes, antibacterial, analgesic, antipyretic, antifungal, anti-inflammatory, anthelmintic, cardiovascular, anticonvulsant and selective COX-2 inhibitory activities. Indole and its derivatives represent one of the most active class of compounds possessing a wide spectrum of biological activities (1-7). Major efforts have been directed by the nucleoside chemists towards the synthesis of analogues of acyclovir and other acyclo nucleosides with various side chains and

aglycons (20) thiazolidinone moiety is associated with variety of biological activities including antifungal [9], anti-inflammatory [10], anticonvulsant [11], antitubercular [12], antihistamine [13]. Considering that both molecules as well as acyclic nucleoside with various side chains are potent pharmacophores the combinations of these two moieties may result in interesting biological activities and this is the aim of the present investigation. Indole 3-carboxaldehyde (1) was alkylated with the appropriate alkylating agent (2) using anhydrous K_2CO_3 and pyrene amines was added. The reaction proceeded at room temperature within few minutes to yield the corresponding acyclic nucleoside derivatives (3) in good yields (76-92%). New indole Schiff base derivatives having a pyrene nucleus were synthesized through a condensation reaction between an acyclic nucleoside type of indole-3-carboxaldehyde (1) and 1-aminopyrene in refluxing ethylalcohol for 6h to give Schiff bases 5a,c,e-g in good yield (78-87%)

R	1	2	3	4	5	6	7
Compound	H	CH ₃	OCH ₃	Cl	NO ₂	CF ₃	Br

N-Alkylated indole -3-carboxaldehyde (3) eg were condensed with *N*-acetyl pyrene4(a)in refluxing ethanol and in the presence of 1%KOH to yield the ethylenic compounds 5(a-f)eg in the good yield (80-84%).

The HNMR spectra for compounds 5(a-f)eg showed the pattern for the CH=CH Group as an AB system which appears at δ 785 and 752 ppm as two doublets with the coupling constant $J=159\text{Hz}$. The ^{13}C NMR spectra showed a peak in the range 195-200 ppm characteristic for $\text{C}=\text{O}$ conjugated to pyryne which also confirmed the structure micro analysis and FAB MS. Compounds 6(a-f)eg and 10(a-f)e.g were examined for possible antiviral activity against HIV-1 using MT-4 cell as target cell. Compounds 10a and 10e were found moderately active against HIV-1 with the effective doses $\text{ED}_{50}=10$ and $18\mu\text{M}$, respectively. The selectivity was low as the toxic doses for the compounds 10a and 10e were found to be $\text{CD}_{50}=70$ and $32\mu\text{M}$ respectively. Compounds 10a and 10e were toxic to the MT-4 cell, but no activity was found against HIV-1 at non-toxic concentrations. The compounds were also screened against herpes simplex virus (HSV-1) replication using vero cell as target cells, but no activity was found.

Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetate(6)

To a solution of Ethyl2-(3-((1,9-dihydro pyrene-6-yl imino)methyl)-1H-indol-1-yl)acetate(5) in 1,4 dioxane monochloroacetylchloride and triethylamine was added drop wise with constant stirring. The reaction mixture was then refluxed on water bath and excess of dioxane was distilled out and resulting mixture was poured on to ice cold HCl, filtered, dried and recrystallised from ethanol to give the desired product. The general procedure was extended to substituted indoles to synthesize thiazolidine-4-one derivatives 5(a-f). The structures of this newly synthesized compounds were characterized by H-NMR and IR spectral data. The IR(KBr) spectrum of Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetate(6) was recorded in the range $4000-667\text{cm}^{-1}$ and the absorption signals were found at $3250(\nu\text{-NH})$, $3100(\nu\text{-Ar-H})$, 2985 and $2965(\nu\text{ aliphatic CH}_2\text{ and CH}_3)$, $1780(\nu\text{ CO of ester group})$, $1680(\text{C}=\text{N})$, and $1190(\nu\text{ C-O-C of ester group})$, $1190(\text{C}=\text{S})$.

$^1\text{HNMR}$ Spectra (δ_{ppm}): The $^1\text{HNMR}$ spectra of Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetate(6) was recorded in DMSO-d₆ solvent. The NMR signal of Ethyl2-(3-(4-chloro-3-oxo-1-((4-(4-(trifluoromethyl)phenyl)thiazol-2-yl)amino)azetid-2-yl)-1H-indol-1-yl)acetate(5) 1.31 (t, 3H, $J=13.2\text{Hz}$, CH_3 of ethyl group), 4.15 (q, 2H, $J=13.2\text{Hz}$, CH_2 of ethyl group), 4.80 (s, 2H, N- CH_2 group), 4.92 (s, 1H, N-NH), 3.90 (d, 1H, Ha of $-\text{CH}_2$ of thiazolidinone), 3.99 (d, 1H, Hb of $-\text{CH}_2$ of thiazolidinone), 7.04-8.31 (complex, m, 6H, five aryl protons of the indole ring, one α -proton of the indolyl ring), pyrene group (multiplets at 7.90- 8.25).

Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetic acid(7)

The synthesis of the synthon Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetate(6) to this solvent mixture tetrahydro furan/methylalcohol/ H_2O (1:1:1) ratio, aq NaOH(2 N) was added and reflux for 6 hrs. The progress of the reaction was monitored by cyclohexane: ethylacetate (4:6) solvent mixture as an eluent. After completion of reaction solvent was evaporated under vacuum to give crude. The residue was washed with ethyl acetate to remove impurities. The residue was acidified with 1N HCl up to $\text{pH}=2$ to give solid suspension which was filtered under vacuum to give crude solid. The crude was purified by chromatography (60-120 mesh-silicagel, eluent: 70% ethylacetate-pet ether) to afford acid compound Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetic acid(7). The structures of this newly synthesized compounds were characterized by H-NMR and IR spectral data. The IR(KBr) spectrum of compound Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetic acid(7) was recorded in the range $4000-667\text{cm}^{-1}$ and the absorption signals were found at $3260(\nu\text{-NH})$, $2950(\text{OH})$, $3100(\nu\text{-Ar-H})$, 2990 and $2960(\nu\text{ aliphatic CH}_2\text{ and CH}_3)$, $1785(\nu\text{ CO of ester group})$, $1680(\text{C}=\text{N})$, and $1195(\nu\text{ C-O-C of ester group})$, $1195(\text{C}=\text{S})$.

¹HNMR Spectra (δ_{PPm}): The ¹HNMR spectra of was recorded in DMSO-d₆ solvent. The NMR signal of compound Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetic acid(7(a)) was found at 4.92(s,1H,N-NH), 3.95(d,1H,Ha of -CH₂ of thiazolidinone),4.20(d,1H,Hb of -CH₂ of thiazolidinone),,7.01-8.29(complex,m,6H,five aryl protons of the indole ring,one α -proton of the indolyl ring), pyrene group (multiplets at 7.93- 8.29). ,10.5-12(broad signal of -COOH of -OH) *Synthesis of 2-(1-(2-azido-2-oxoethyl)-1H-indol-3-yl)-3-(1,9-dihydropyrene-6-yl)thiazolidin-4-one(8)* . Earlier we have identified various useful methodologies for the synthesis of indole derivatives containing thiazolidin-4-one heterocyclic moieties. Here we are describing the synthesis of substituted urea derivatives processing indole moiety containing thiazolidin-4-one. In the present investigation the required synthons Ethyl2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetic acid(7). At this instance to a solution of 2-(3-(4-chloro-3-oxo-1-((4-(4-(trifluoromethyl)phenyl)thiazol-2-yl)amino)azetid-2-yl)-1H-indol-1-yl)acetic acid 6(a) (1eq) in acetone ,TEA(3eq) was added and stirred at -15^oC for 20min. To this reaction mixture ISOBUTYL CHLORO FORMATE (1:1eq) was added and stirred for 30 min. To the above reaction mixture aq NaN₃(3eq) was added and stirred for 20min at 0^oC. The progress of the reaction was monitored by TLC with acetone . ethyl acetate (6:4) as mobile phase .The reaction mixture was cooled poured on ice cold water(20ml),extracted with 10ml diethyl ether (5timesThe organic layer was separated, washed with water,dried over anhydrous Na₂SO₄ . The dried organic layer was filtered and evaporated under vacuum to give crude oil. The crude oil was purified by column chromatography by using 60-120 mesh silica gel. The 10% ethyl acetate-pet Ether solvent mixture was used as eluent. After the evaporation of the solvent under vacuum it affords pure 2-(1-(2-azido-2-oxoethyl)-1H-indol-3-yl)-3-(1,9-dihydropyrene-6-yl)thiazolidin-4-one(8) The structures of this newly synthesized compounds were characterized by H-NMR and IR spectral data. The IR(KBr)

spectrum of compound 2-(1-(2-azido-2-oxoethyl)-1H-indol-3-yl)-3-(1,9-dihydropyrene-6-yl)thiazolidin-4-one(8) was recorded in the range 4000-667cm⁻¹ and the absorption signals were found at 3260(-NH), 3100($\sqrt{}$ -Ar-H), 2990 and 2960 ($\sqrt{}$ aliphatic CH₂ andCH₃),1740(carbonyl group), 1680(C=N) , and 1195(C=S).

¹HNMR Spectra (δ_{PPm}): The ¹HNMR spectra of 2-(1-(2-azido-2-oxoethyl)-1H-indol-3-yl)-3-(1,9-dihydropyrene-6-yl)thiazolidin-4-one(8) was recorded in DMSO-d₆ solvent. The NMR signal of 1-((3-(4-chloro-3-oxo-1-((4-(4-(trifluoromethyl)phenyl)thiazol-2-yl)amino)azetid-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea 8(a) was found at 4.38(s,2H,- N-CH₂ -N-),4.92(s,1H,N-NH), 3.97(d,1H,Ha of -CH₂ of thiazolidinone),4.30(d,1H,Hb of -CH₂ of thiazolidinone),,7.04-8.31(complex,m,7H,five aryl protons of the indole ring,one α -proton of the indolyl ring,one),. pyrene group (multiplets at 7.90- 8.22).

Synthesis of 1-((3-(3-(1,9-Dihydropyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea(10) To a mixture of pure 2-(1-(2-azido-2-oxoethyl)-1H-indol-3-yl)-3-(1,9-dihydropyrene-6-yl)thiazolidin-4-one(8) (1eq),in aniline (1eq) was added and refluxed for 16hrs.progress of the reaction was monitored by TLC with acetone . ethyl acetate (6:4) as mobile phase. After completion of reaction solvent was evaporated under vacuum to give crude residue,purified by column chromatography 60-120 mesh silica gel to give 1-((3-(3-(1,9-Dihydropyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea(10) The structures of this newly synthesized compounds 10(a-f) were characterized by H-NMR and IR spectral data. The IR(KBr) spectrum of compound 1-((3-(3-(1,9-Dihydropyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea(10) was recorded in the range 4000-667cm⁻¹ and the absorption signals were found at 3260(-NH),3100($\sqrt{}$ -Ar-H), 2990 and 2960 ($\sqrt{}$ aliphatic CH₂ andCH₃), 2140(NEN) ,1775 ($\sqrt{}$ Azetidine C=O), 1630(C=N) and 680($\sqrt{}$ C-S-C).

¹HNMR Spectra (δ_{PPm}): The ¹HNMR spectra of 1-((3-(3-(1,9-Dihydropyrene-6-yl)-4-oxo

thiazolidin-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea(10) was recorded in DMSO-d₆ solvent. The NMR signal of 1-((3-(3-(1,9-Dihydropyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea(10) was found at 4.38(s,2H,- N-CH₂ -N-),4.92(s,1H,N-NH), 3.99(d,1H,Ha of -CH₂ of thiazolidinone),4.35(d,1H,Hb of -CH₂ of thiazolidinone),,7.04-8.31(complex,m,7H,five aryl protons of the indole ring,one α-proton of the indolyl ring,)),. pyrene group (multiplets at 7.85- 8.35).

EXPERIMENTAL SECTION

Ethyl 2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetate(6)

Monochloroacetyl chloride(0.01)was added drop wise to schiffs base (0.01) and triethylamine (0.02mol) in dioxane(25ml) at room temperature. The mixture was stirred for 8hrs and left at room temperature for 3days. Pour the contents on crushed ice. The product thus formed was filtered and washed with sodium carbonate solution.The dried product was recrystallised with absolute alcohol. The MP was 182-184^oC with a yield of 58%.

Ethyl 2-(3-(3-(1,9-dihydro pyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)acetic acid(7)

To a solution of ester(5) (1eq) in tetrahydrofuran /MeOH/H₂O(1:1:1) ratio, aq NaOH(2N) was added and stirred (room temp) or reflux for 4-16h. after completion solvent was evaporated under vacuum to give crude residue.The residue was washed with EtOAc(removing impurities).After that residue was acidified with 1N HCl up to P^H -2 to give solid suspension, filtered under vacuum to give fine solid. If solid is not obtained extracted with EtOAc (200ml) twice. The organic layer was collected, washed with water,brine,dried over anhydrous Na₂ SO₄, filtered and evaporated under vacuum to give a crude acid product.The crude was purified by column chromatography(60-120 mesh-silca gel, Eluent: 70% EtoH-pet ether) to give compound 2-(3-(4-chloro-3-oxo-1-((4-(4-(trifluoromethyl)phenyl)thiazol-2-

yl)amino)azetid-2-yl)-1H-indol-1-yl)acetic acid(6).

2-(1-(2-azido-2-oxoethyl)-1H-indol-3-yl)-3-(1,9-dihydropyren-6-yl)thiazolidin-4-one(8).

To a solution of acid (6) (1eq) in acetone, triethyl amine (3eq) was added and stirred at 15^oC.To that isobutyl chloroformate (1:1eq) was added stirred for 30min, and aq NaN₃ (3eq) was added and stirred for 20min at 0^oC. After completion, reaction mixture was poured in ice cold water (20ml), extracted with diethylether (10times).The organic layer was separated, washed with water,brine,dried over anhydrous Na₂ SO₄, filtered and evaporated under vacuum to give crude oil.The crude oil was purified by column chromatography(60-120 mesh silicagel,eluent:10% EtOAc-pet ether)to give pure 2-(3-(4-chloro-3-oxo-1-((4-(4-(trifluoromethyl)phenyl)thiazol-2-yl)amino)azetid-2-yl)-1H-indol-1-yl)acetyl azide (7).

1-((3-(3-(1,9-Dihydropyrene-6-yl)-4-oxo thiazolidin-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea(10)

To a mixture of acid azide (7)(1eq), in benzene, primary amine (1eq) in benzene was added and refluxed for 16h.After completion of the reaction, solvent was evaporated under vacuum to gave crude residue, purified by column chromatography (60-120 mesh silica gel, Eluent: 80% EtOAc-pet ether) to give 1-((3-(4-chloro-3-oxo-1-((4-(4-(trifluoromethyl)phenyl)thiazol-2-yl)amino)azetid-2-yl)-1H-indol-1-yl)methyl)-3-phenyl urea 9(a-o).

ANTI-MICROBIAL ACTIVITY

Media and chemicals

Nutrient Broth, Nutrient agar and 5 mm diameter antibiotic assay were obtained from Hi-Media Laboratories Limited, India. Barium chloride hydrate GR, concentrated sulphuric acid GR, Dimethyl sulphoxide GR, Sodium chloride AR and Potassium dichromate were obtained from Ranbaxy Laboratories Ltd, Chemical Division India. The standard bacterial and fungal strains were procured from National Centre for Cell Science (NCCS), Pune, India.

Glass wares and Apparatus

Glass Petri dish, Glass tubes, Beakers, Erlenmeyer flasks, Bacterial loop and measuring cylinder. All the glass wares were of Borosilicate grade. Digital electronics balance (Shankar Scientific supplies, India), Yorco Horizontal Laminar air flow bench (Yorco sales Pvt. Ltd, New Delhi, India), Ausco incubator, Zone reader (Cintex industrial Corporation, India), hot air oven, autoclave and UV/Visible spectrophotometer (Shimadzu corporation, Japan).

Antibacterial activity

The antibacterial activity of synthesized compounds was studied by the disc diffusion method against the following pathogenic organisms. The gram +ve bacteria screened were Staphylococcus aureus NCCS 2079 and Bacillus cereus NCCS 2106. The gram -ve bacteria screened were Escherichia coli NCCS 265 and Pseudomonas aeruginosa NCCS 2200. The synthesized compounds were used at the concentration of 250 µg/ml and 500 µg/ml using DMSO as a solvent. The amoxicillin 10 µg/disc and cefaclor 30 µg/disc were used as a standard (Himedia laboratories limited. Mumbai).

Disc Diffusion Method

A suspension of Staphylococcus aureus was added sterile nutrient agar at 45°C. The mixture was transferred to sterile Petri dishes to give a depth of 3 to 4 mm and allowed to solidify. Precautions were observed to reduce uniform layer of medium on the plate. Sterile discs 5mm in diameter (made from Whatman Filter paper) were immersed in the solutions of synthesized compounds (250 µg/ml) and maintain an untreated control sample for comparison. Leave the plates to stand for 1hour at room temperature as a period of pre-incubation diffusion to minimize the effects of variations in different time. Then the plates were incubated at 37°C for 24 hours and observed for antibacterial activity. .

Antifungal activity

The antifungal activity of synthesized compounds were studied by disc diffusion method against the organisms of Aspergillus Niger NCCS 1196 and Candida albicans NCCS 3471 Compounds were treated at the concentrations of 100 µg/ml, 250 µg/ml, 500 µg/ml and 1000 µg/ml using DMSO as a solvent. The standard used was ketaconazole 50 µg/ml against both the organisms.

Disc Diffusion Method

A suspension of Aspergillus Niger NCCS 1196 was added to sterile sabouraud dextrose agar at 45°C. The diameters of the zone of inhibition were measured for the plates in which the zone of inhibition was observed. The average zone of inhibition was calculated with that of standard. A similar procedure was carried out for studying the antifungal activity the other organisms (Candida albicans).

Determination of Minimum Inhibitor Concentration

Medium: Nutrient Broth Test tubes: 16 x 100 mm glass tubes with loose fitting metal caps.

Method (Broth Dilution Method)

Standardized Inoculums (matched to McFarland BaSO₄ standard) of suspension of organisms were prepared. A series of glass tubes containing different concentration of test compounds dissolved in DMSO and spiller in Nutrient Broth were incubated with one drop of inoculum and mixed gently by shaking the rack. Two growth control tubes were also prepared without the addition of test compound and its optical density was determined as follows. 0.1 ml of control was mixed with 0.9 ml of Sterile Saline and with 0.2µL loop, an Agar plate was inoculated. The control should contain 1 x 10⁻⁵ colony forming units/ml=20colonies. Incubate the tubes for 24 hours at 37°C in air. The MIC of the compounds was presented in given tables.

Characterization and biological activity of thiazolidinone is shown in the given reference - Synthesis of 1,3,4 oxadiazole derivatives containing indole moiety bearing thiazolidinone and anti-inflammatory activity of thiazolidinone International journal of chemtech Research vol.6,NO.1,pp183-194,Jan-March2014

CONCLUSION

1. Further more the substitution with phenyl group having a chloro group at p-position showed better activities.
2. The thiazolidinone showed better antibacterial and antifungal activities.
3. Indoles and its derivatives were found to play an important role in medicinal chemistry as herbicidal, fungicidal, bacterial, anti-inflammatory.

ACKNOWLEDGEMENT

- My sincere thanks to UGC authorities for providing financial assistance to continue research in better manner

- I am very thankful to S.K. University authorities for providing such an environment for doing better research very much.
- It's my pleasure to express my thanks to the Department of Chemistry for giving an opportunity to do research.
- I express my sincere thanks to my research Supervisor Prof P.Raveendra Reddy.
- I express my sincere thanks to Prof LK Ravindranath, who is giving valuable guidance during my research.
